Luke Cross | Engineering Manager

London, United Kingdom

lukecross@live.co.uk • lukey.dev • lukewcross

Engineering manager and lead full-stack engineer with 10+ years experience building secure, business-critical web platforms at Epic Games, Mediatonic and BAE Systems. Currently lead a distributed team of eight engineers delivering internal tools used across Epic and supporting Fortnite-related initiatives. Strong hands-on background in React, Next.js, TypeScript, Node.js and C#, with particular strengths in technical direction, people leadership and operational tooling.

Technical Skills

Leadership & Delivery: Engineering management, technical strategy, mentoring, roadmap planning, stakeholder management

Languages & Frameworks: TypeScript, JavaScript, C#, SQL, React, Next.js, Node.js

Cloud & Platform: AWS, Azure, Kubernetes, Docker, Terraform

Data & Observability: PostgreSQL, MongoDB, Redis, Grafana, Datadog

AI-Assisted Engineering: Claude Code and AI development workflows

Previous Employment

Epic Games
Engineering Manager — *April 2025–Present*

Leading a global team of 8 web engineers building internal tooling platforms and applications that help power Fortnite and other critical initiatives across the company. My team focuses on creating scalable, high-impact internal business tools that streamline operations and accelerate development across Epic.

- Set technical direction and delivery priorities for tools used by >2,000 employees monthly across 20+ teams or functions
- Partnered with product, operations and engineering stakeholders to translate complex business requirements into scalable React, Next.js and TypeScript solutions
- Acting as Technical Product Owner for internal platforms, managing intake processes, roadmaps, and backlog prioritization
- Introduced automated AI code reviews, improving lead time, release frequency and code quality
- Coaching junior and senior engineers with expectations, technical standards and one-to-one meetings

Engineering Management, Full-stack Development, React.js, Next.js, TypeScript

Epic Games/Mediatonic
Senior Full Stack Engineer — *April 2022–April 2025*

Worked as an individual contributor on the Internal Business Tools and Fall Guys Web Tools teams, delivering high-impact internal web applications. Contributed across the full stack, building platforms that streamlined operations and enabled teams company-wide to operate more effectively.

- Contributed to and maintained a suite of 20+ services and applications spanning Fall Guys and Fortnite
- Designed and executed features for Epic Games internal web tooling platform that grew from 20 to >120 hosted applications
- Built end-to-end Player Support tooling for the Fall Guys free-to-play launch, enabling operational teams to support a global player base of millions

Full-stack Development, React.js, Next.js, TypeScript, C#

- **BAE Systems Applied Intelligence**
  Software Engineer/Senior Software Engineer *August 2016–March 2022*

  Developed and delivered bespoke software systems for the defence sector, working on highly secure and mission-critical applications. Collaborated with cross-functional teams to design, build, and deploy tailored solutions that addressed complex customer requirements while meeting strict security and compliance standards. Contributed across the full software development lifecycle, from requirements gathering through to implementation and long-term support.

  Full-stack Development, React.js, TypeScript, C#

- **Microsoft**
  Software Development Engineer in Test *July 2014–June 2015*

  Completed a year-long internship focused on improving product quality and engineering efficiency through automation and testing at scale. Developed and maintained automated test suites, reducing reliance on manual testing and increasing test coverage across critical game features. Built tools and scripts to automate repetitive manual processes, streamlining workflows for the engineering and QA teams.

  Test Automation, Python, C#

Education

Academic Qualifications

- **University of Birmingham**
  BSc (Hons) Computer Science with Industrial Year, First Class (83%) *2012–2016*

Notable Projects

- **Degree Dissertation:** *'Using Twitter sentiment analysis to dynamically rate products and services.'*

  A C# ASP.NET MVC web application that provides users a way to find out what the world thinks of a particular product/person/service/event using Twitter Sentiment Analysis.

Interests and Hobbies

- Casual gamer
- Keen interest in design and user-experience
- Enjoy participating in team sports such as: football and basketball
